Digidentity

For the purposes of the services provided by Digidentity a privacy audit was carried out by Privacy Verified. Digidentity declares that it safeguards the privacy of its customers by complying with the points below. Privacy Verified conducts a yearly reinspection in order to check whether Digidentity continues to abide by these points.

Compliance with privacy by design and by default standards.

Business processes are implemented according to privacy by design and by default standards. When developing new technologies, these standards are followed and default settings are privacy proof.

Internal processes and necessary documents are in place to comply with privacy requirements

The necessary processes and documents are in place to protect personal data, such as a data breach contingency plan, internal privacy policy and authorization and security policy.

Opportunity for data subjects to exercise their rights

The necessary measures have been taken to enable data subjects to exercise their rights.

Data subjects are informed about how their personal data are used

Data subjects (customers and employees) are informed at the time their data has been collected/received.

Personal data are not processed longer than necessary

Retention periods are in place and appropriate for data processing. These retention periods are strictly adhered to.

Processor agreements with third parties are in place

Personal data is only processed on behalf of third parties if the necessary agreements have been concluded between the parties.

Clear purposes for processing personal data.

Processing purposes are predetermined and clearly stated.

Certification Foundation oversees the certification and issuance process of Privacy Verified.
